

Replacement and Recycling of Mercury Lamps from Aesthetics

Aesthetics Lighting is proud to be associated with Interwaste Ltd., New Zealand's only dedicated and certified lamp disposal service of fluorescent and metal halide lamps.

Improper disposal of lamps containing mercury poses a serious environmental and health risk for New Zealanders, so we have developed a system of lamp collection and reimbursement in the interests of the community. This service is in full compliance with the Resource Management Act, land-fill regulations and EECA's environmental policy.

Glass is recycled into housing insulation, aluminium is turned into amalgam for dental fillings and the phosphor eventually becomes agricultural fertiliser.

By returning failed fluorescent tubes (including T8, T5 and compact fluorescent lamps) and metal halide lamps (including G12, G8.5 and double-ended R7s), you will receive a discount of either **\$2.00** off each replacement fluorescent lamp or **\$5.00** off each replacement metal halide lamp you purchase through us.

Aesthetics will collate your lamps and send to Interwaste for safe disposal and recycling of glass and components.
